

CSNHS 26-27 Hackathon #1

Building Your High School Portfolio

all four years, in one place

page 01

The Problem

By senior year, students have done a ton: clubs, sports, volunteering, awards, projects, jobs. But when it's time for college apps, scholarships, or resumes, most of it is scattered or forgotten. Nobody remembers how many volunteer hours they did sophomore year or what that award was called.

the challenge:

Create a mobile application that enables students to create a portfolio of their high school experiences.

page 02 · your solution must include

Solution Requirements

a CS concept

Sorting by date or category, filtering by type (clubs, sports, awards, volunteering), tracking hours, searching, timelines, etc.

keep it real

Realistic and implementable at a high school level.

user experience

Explain how students AND counselors use your app, OR design a GUI for both perspectives.

core logic

A simple flowchart and pseudocode snippet showing how your app works.

page 03 · your slides must include

PowerPoint Requirements

Problem Statement: What specific problem with tracking high school experiences is your team tackling?

Proposed Solution: How your app fixes this problem

Flowchart and Pseudocode

User Interface: Either explain in detail how students AND counselors interact with your app, OR design a GUI for both

The topic might look simple...

so get creative with it!

The best projects go way past the basics. Add your own twist, think about what students would actually want to use, and surprise us.

what if it had
badges or streaks?

what if it built your
resume for you?

what if friends could
hype your wins?

Good luck to all the teams!

thank you!
